

ArCADia

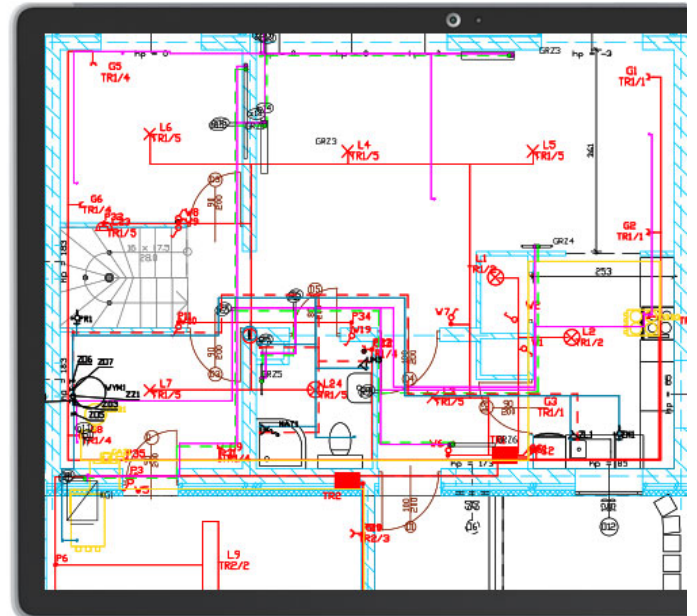

Work in a CAD environment using BIM tools. Object drawing, quick documentation creation.

Software based on a well-known and developed for many years CAD platform, which guarantees full compliance with the DWG format.

The first Polish software for the construction industry allowing the designer to work in accordance with BIM technology.

Software that uses many solutions that significantly accelerate design work in the construction industry. By using objects such as a multi-layer wall, doors or windows, the user can quickly create CAD drawings, without losing anything from the full compatibility of the project with the DWG format.

The ArCADia program ends Autodesk's monopoly on the market of CAD programs, bringing to an end unjustified overpricing and proving that a program with high quality and functionality can be available at a price which is corresponding to the capabilities of each designer.

ArCADia software FEATURES:

- Support BIM technology, object-oriented architectural design.
- Ready-made architectural elements: multilayer walls, stairs, bases, columns, chimneys, windows and doors.
- Comparing and merging documents.
- Automatic floor entry, additional support for Teriva floor design.
- Drawing of flat and spatial technical documentation and its writing to the native dwg format characteristic of most CAD applications.
- Work on layered drawing with the ability to use groups, blocks, external references and raster backdrops.
- Precise drawing with the ability to use Cartesian and polar coordinates, characteristic points and tracking.
- Work on a real-world model and the ability to print at any scale from a specified sheet of paper.
- Generating statements.
- Supporting the IFC format. A possibility to exchange design data with other programs.

Included FEATURES:

- BIM FEATURES
- ADVANCED DRAWING TOOLS

BIM FEATURES

BASIC TOOLS | ARCHITECTURE | CONSTRUCTION | WATER INSTALLATIONS | SEWAGE INSTALLATIONS | GAS INSTALLATIONS | HEATING INSTALLATIONS ELECTRICAL INSTALLATIONS | COMMUNICATION

BIM FEATURES - BASIC TOOLS

Project Manager tree

Managing views and the displayed information through the clear tree of the Project Manager.

Walls, windows, doors

Inserting elements such as wall, pipe, etc. using the smart tracking function.

Visualization

Showing elements drawn in the view in a classic or the new 3D view rendered in real time (visualization using a 3D game engine).

Smart TOP 10

A smart list of the most often used commands that are automatically memorized when working on a project, creating a personalized tool palette.

Comparing

The possibility to compare two versions of a project created as an ArcCADia system model in the scope of new and modified system elements.

Merging

The possibility to merge the building model from an architectural design with the installation design models to create one complete model of a building project.

Collision

Collisions list of all or individual ArcCADia system elements on a view, 3D view and a clear list.

Library

Built-in library that allows for detailing with 2D symbols and 3D objects needed in the drawing.

Drawing tables

Creating and inserting drawing tables with the option of saving them to the program library.

Custom setting

Saving custom settings for elements (pens, fonts, default element sizes, etc.) in the project template.

Elements

Built-in library of all elements types, with the possibility of expansion.

Dimensioning

Possibility of entering linear and angular dimensioning.

BIM FEATURES - ARCHITECTURE

Choice of defined or drawing any multilayer wall. Built-in catalogue of construction materials.

Inserting of window and door woodwork in a parametric way. Inserting woodwork.

Automatic creation of rooms from the closed outlines of walls and virtual walls, assigning names, functions, temperature and lighting demand.

Defining one- and multi-flight stairs and winder stairs in any view.

Inserting an automatic roof on the closed external walls contour. Inserting of roof windows and dormer windows.

Creating a level with the possibility of copying selected elements.

Inserting automatic ceilings on the closed external walls contour.

>> MORE FUNCTIONS

BIM FEATURES

BASIC TOOLS | ARCHITECTURE | CONSTRUCTION | WATER INSTALLATIONS | SEWAGE INSTALLATIONS | GAS INSTALLATIONS | HEATING INSTALLATIONS ELECTRICAL INSTALLATIONS | COMMUNICATION

BIM FEATURES - CONSTRUCTION

Constructing the structural systems of Teriva ribbed-beam roofs, containing all the basic elements of the system: ceiling beams, reinforcing ribs, hidden ribs, exchanges, supporting mesh and additionally all necessary material lists including the elements needed to make the ceiling, completed with reinforcing steel and monolithic concrete .

Inserting the binding joist with the insertion of longitudinal reinforcement and stirrups.

Transferring the location and the material as well as the bar cross-section to the construction view. Passing the remaining elements of the architectural model in the form of a rendered or translucent 3D view, and in the case of modular axes, bar elements and surface elements also in the form of their active underlay.

Automatic 3D construction view created on the basis of a three-dimensional architectural model of a building.

>> MORE FUNCTIONS

BIM FEATURES - WATER SUPPLY INSTALLATIONS

Drawings of the internal water supply system | connection point | water meter set | pipelines.

Automatic generation of connection fittings, creation of point numbering and installation description. Creating own templates.

Inserting fittings and devices from the manufacturers' library. Inserting devices with individually set shapes and dimensions defined by the user (eg DHW heaters). Inserting into the program library typical element systems.

Applying risers and distribution pipes from a library. It is possible to simultaneously run several parallel conduits with different functions and connect them intelligently. Drawing simplifications that allow you to change the level of many elements of the installation at the same time.

Q	PS1	Level 1	Incorrectly connected
Q	PS1	Level 1	Unconnected pipe
Q	PS1	Level 1	Incorrectly connected
Q	PS1	Level 1	Unconnected pipe

Checking the installation for connections correctness.

	Shut-off valve
	Sink faucet

Generating ready-made materials lists, devices and connection fittings included in the project.

>> MORE FUNCTIONS

BIM FEATURES - SEWAGE INSTALLATIONS

3D installation preview, which facilitates the correcting of irregularities in the pipeline route not shown on the view.

Item	Name	Unit	Quantity
1	Elbow 1° Polyethylene	pcs	1.00
2	Elbow 30° Polyethylene	pcs	1.00
3	Elbow 30° Polyethylene	pcs	1.00
4	Elbow 30° Polyethylene	pcs	1.00
5	Elbow 45° Polyethylene	pcs	1.00

Generating ready-made materials lists, devices and connection fittings included in the project.

Entering the pipeline route of the sewage system with a given slope on the view.

Pipelines with automatic distinction between outflow channels, risers and connecting pipes for accessories.

Installati...	Location Level	Description
Q	Level	Unconnected pipeline
Q	Level	Unconnected pipeline
Q	Level	Items unconnected to
Q	Level	Items unconnected to

Generating ready-made materials lists, devices and connection fittings included in the project.

Name
Three-way DN100 Elbow
Three-way 30 PVC DN100
Elbow 1 PVC DN100

Checking the installation for connections correctness.

BIM FEATURES

BASIC TOOLS | ARCHITECTURE | CONSTRUCTION | WATER INSTALLATIONS | SEWAGE INSTALLATIONS | GAS INSTALLATIONS | HEATING INSTALLATIONS ELECTRICAL INSTALLATIONS | COMMUNICATION

BIM FEATURES - GAS INSTALLATIONS

Drawings of the internal gas installation.

Automatic generation of a set of connection fittings.

Gas installation item list

Drawing	Name	Quantity	Unit
	Non-remover cooker with roaster, 50 kW, 2MS, 3	1	pc
	Screw thread	1	pc
	Gas boiler, 30.3 kW, 2MS, 1	1	pc
	Screw thread	1	pc
	Gas box, 1	1	pc
	Gas valve, 2MS, 1	1	pc
	Screw thread	1	pc

Ready-made lists of materials and lists of elements.

Fittings and devices from the manufacturers' library.

Possibility to easily and quickly enter additional databases to the main library.

Installati...	Location	Description
GB1	Ground floor	Unconnected pipe
GB1	Ground floor	A appliance or val
	Ground floor	Items unconnecte
	Ground floor	The element is not

Checking the installation for connection correctness.

>> MORE FUNCTIONS

BIM FEATURES - HEATING INSTALLATIONS

List of receivers at rooms

Room number	Room name	Room temperature [°C]	Receiver power [W]	Type/series of type
Level 2				
Ungrouped				
2	Bathroom	24.0	2500	Series: LER10004
2	Room	22.0	750	Typ: 10
2	Room	22.0	900	Typ: 21
2	Room	22.0	2550	

Ready-made materials lists, devices and connection fittings. Lists of receivers in rooms.

Heat receivers, i.e. panel, ribbed, bathroom and channel heaters, heating pipes, air heaters and fan-coil units.

Fittings and devices from the manufacturer's library.

Automatic creation of point numbering and installation descriptions. Creating own templates.

Inserting the fastening with the possibility of defining parameters characteristic for the fastening used.

Installati...	Location	Description
KPS1	Level 0	The installation de
	Level 0	Unconnected pipe
	Level 0	Unconnected pipe

Checking the installation for connection correctness.

>> MORE FUNCTIONS

BIM FEATURES - ELECTRICAL INSTALLATIONS

Drawing of internal electrical installations with distribution boards, sockets, connectors, boxes, lighting fixtures.

Designation of cable routes.

An extensive library of manufacturers catalogues of electrical installation elements.

Possibility to assign receivers to a particular distribution board (addressing).

Electric installation material list

Item...	Name
Ungrouped	
1	Ceiling lamp, IP 20, 1x30W

Generating a list of materials used in the project.

>> MORE FUNCTIONS

Possibility to modify symbols of entered objects and assign receivers to a particular distribution board.

BIM FEATURES

BASIC TOOLS | ARCHITECTURE | CONSTRUCTION | WATER INSTALLATIONS | SEWAGE INSTALLATIONS | GAS INSTALLATIONS | HEATING INSTALLATIONS ELECTRICAL INSTALLATIONS | COMMUNICATION

BIM FEATURES - COMMUNICATION

AutoCAD format from 2.5 to 2018 (DWG, DXF).

Importing/editing raster images files : JPG, TIF, BMP, PNG.

Import PDF files analogously to raster underlays or with conversion to vector elements. Export to PDF file.

Possibility to enlarge the library of 2D / 3D objects with the formats: XOBJECT, ACO, O2C, OBJ, XOBJ3D and DWG.

IFC file conversion into ArcCADia's basic objects (walls, windows, doors, ceilings, roofs).

Export of material lists of elements included in the project to RTF, CSV and to the Ceninwest program.)

DRAWING TOOLS

An extended CAD drawing engine

ADVANCED DRAWING TOOLS

The program window is divided into tabs in which the drawings are successively displayed.

Working on layers. Project management explorer.

Docked property panel.

Displaying tool palettes. Dedicated Express tools toolbar.

Implemented Lisp programming language interpreter. Possibility to load SDS and IRX overlays.

Basic tools for creating 2D and 3D drawings.

Ability to open and fully edit ACIS solids (format developed by Spatial Technology Inc.). Import and export of ACIS solids in SAT format. **Only in ArcCADia PLUS.**

Possibility to fully modify and edit the properties of all drawn elements.

Entering and defining symbol libraries, blocks, simple and complex texts (SHX and TrueType fonts). Additional multiline text editor. New functions of the word editor: columns, scaling, entering text along the arc and borders, text fitting, rotation, auto numbering, etc.

Dimensioning assigned to the element: linear and angular, the ability to define your own styles.

Automatic field and distance measurement, setting coordinates.

New options for construction lines.

DRAWING TOOLS An extended CAD drawing engine

ADVANCED DRAWING TOOLS

A wide range of hatch patterns. New hatch definition and gradient fill window.

A multiline drawing option.

Enhanced block, reference and dimension support capabilities.

Options: Select similar (with adding to the selection and the settings window), Multiagency, Multiline editor, Dashed line.

Possibility to add point cloud in RCP / RCS format.

New types of 3D objects (primitives) - Facet Modeler (ODA surface modeler), along with basic editing functions.

Possibility of photorealistic visualization and rendering. Drawing in hidden line mode and shading in real time.

Possibility to open ACIS solids (without option to create and fully editing). DWF, DGN and DAE formats support. Export of STL files.

Auxiliary grid, orthogonal drawing functions, polar tracking.

Extended recognition of snap points (ESNAP), e.g. for lines - center, end points and intersections of lines.

Modification of the top menu, ribbons (panels and tabs), toolbars, command status bar and keyboard shortcuts.

Precise printing by setting all print parameters. Possibility to create a non-rectangular viewport in the paper space.
